

Altair Management Consultants is a firm in the spirit of a high value-added boutique. The essence of our activity could be defined as “Management Engineers”. We have the ability and professional experience to understand the key factors in business management in order to identify the potential value-added areas and manage their effective implementation.

Our vision is to become an excellent firm in the management consulting sector with capabilities to operate in the global market. The team of partners wishes to perpetuate Altair in order to leave it in the hands of our next generation of partners, who are forging their career within our company. Our commitment is complete with our clients, with our firm and with all our team.

Job description

We are looking for a Data Analytics Scientist to join our team to participate in our projects with very high analytical skills and very focused on sorting issues out. The proper candidate must be accustomed to work with high data bases extracting different data, mathematical models and informatic process. You will be also able to identify different inefficiencies in these processes, sort them out, optimize their tasks and eventually automate them.

We need a person to develop a wide range of algorithms for automation and optimization processes aiming to create different scenarios to measure all the impacts within our clients’ organizations at an implementation level.

Candidates should have experience in one or more of the following industries:

- Quantitative Finance industry
- Algorithm developing
- Processes engineering
- Operative Investigation

Qualifications Required:

PhD or candidates to PhD in Applied Science (Applied Mathematics, Statistics), Engineering or Quantitative Methods, or other Analytical Science (Physics, Chemistry...)
Academic awareness or recognition
Master's Degree or MBA from a leading business school is a plus
International University education environment is desirable
Excellent level of English and Spanish is essential – a third language is a plus (French, Portuguese, German...)

Experience:

- 3-5 year as professor in University department environment
- To have developed researcher tasks related to financial products and business environment.
- Leadership experience managing different teams
- 5-8 years experience in consulting industry as salaried employee or free lance
- Programming language on different tools and applications like SQL, Python, C++, SAS, Matlab, R...
- Good knowledge of PowerPoint and Excel; Very flexible to travel
