

Amadeus' purpose is to power better journeys, using the latest technologies to develop solutions for our customers. We sit at the heart of every travel journey – journeys that are personalized, rewarding and purposeful.

We are one of the world's top 10 software companies with a global team of 16,000 professionals of 145 nationalities, working across 190 countries.

The future of travel has never been more exciting! With us, you won't just be shaping your own career, you will be shaping the way the world moves. Do you want to be a part of it? Great, then join us!

This trainee role is part of an 18 months trainee program (start October 2021) where individuals will gain insights in all areas of cloud engineering at Amadeus. As an active member of the development team individuals will support the migration to the cloud and define cloud based applications for the travel industry. During this process mentors will support and accompany the individuals on their journey through the cloud and they will receive trainings throughout the program to advance their knowledge on the latest technologies such as OpenShift, Kubernetes, OpenStack, Ansible etc. The goal of the program is that the individuals discover their specialized passion for cloud engineering, to then go on to work as one of the most highly qualified Software Engineers, Cloud Engineers or Site Reliability Engineers to shape the future of travel.

Summary of position:

- Participate in exciting projects regarding cloud, cloud migration, platform design, stability and security of systems (on-prem in the Amadeus data center and in the cloud)
- Design new cloud-based applications for the travel industry
- Access internal and external trainings, certifications and conferences, especially in the cloud area
- Guidance from a mentor and high visibility to top management of the company
- Work with top-notch technology solutions, such as OpenShift, Kubernetes, OpenStack, Docker, Ansible, Bitbucket, Jenkins, Elasticsearch & Kibana, Couchbase, MongoDB, Redis, Splunk and many more
- Participate in international teams and DevSecOps Model and many more

What we offer:

- High learning curve also in cooperation with our strategic cloud partner
- Support and guidance through our mentoring and buddy program
- Permanent fulltime contract with flexible working hours, home office arrangement and trust-based working hours
- Wide range of specialization opportunities and perspectives after the trainee program
- Additional benefits, such as fitness training, travel allowances, canteen, insurance, job bike, etc.

Your Profile:

- Positive spirit, a can-do attitude and a passion for collaboration
- Interest in cloud technology, potentially already backed up with initial work experience
- Understanding of agile working methods
- A drive to learn and bring new ideas, test and implement them
- A Bachelor's degree focusing on computer science, computer engineering, business informatics or similar
- Very good English skills

We look forward to receiving your application!
